Why Supply Chain Operations Management and Performance?

In today's complex and interconnected supply chain operations environment, success is driven by a unique blend of skill sets. This skill set enables professionals to develop and implement sustainable strategies that meet societal, economic and environmental expectations and drive organizational performance.

This course will help procurement and supply chain management practitioners develop appropriate policies, structures and mechanisms to boost efficiency in their organization's supply chain operations. The focus of the workshop is to explore major emerging issues in supply chain operations and performance and other operations management strategies.

What will you learn?

This workshop provides dynamic learning opportunities for procurement and supply chain practitioners to build your capacity to tackle emerging supply chain operations and performance issues. The workshop will apply the supply chain reference model (SCOR) to supply chain operation planning and performance measurement.
